Vision for higher education and research in 2030

The vision for the Finnish higher education and research in 2030 was drawn up in cooperation with higher education institutions and other stakeholders and was published in October 2017.

NB: This project has ended and the webpage will no longer be updated.

The purpose was to formulate a future scenario which enables the development of a high-quality, effective and internationally competitive higher education system in Finland by the year 2030.

In the course of this work, different alternatives and models for improving the Finnish higher education system were examined and their impacts and feasibility assessed. The development needs of the Finnish higher education and research were reviewed and the future desired state defined on the basis of the changes in the national and international operating environment.

The work was carried out in broad and open cooperation with the higher education institutions and their staff, students and stakeholders.

REPORT FROM THE INTERNATIONAL COMMISSION ON THE FUTURES OF EDUCATION

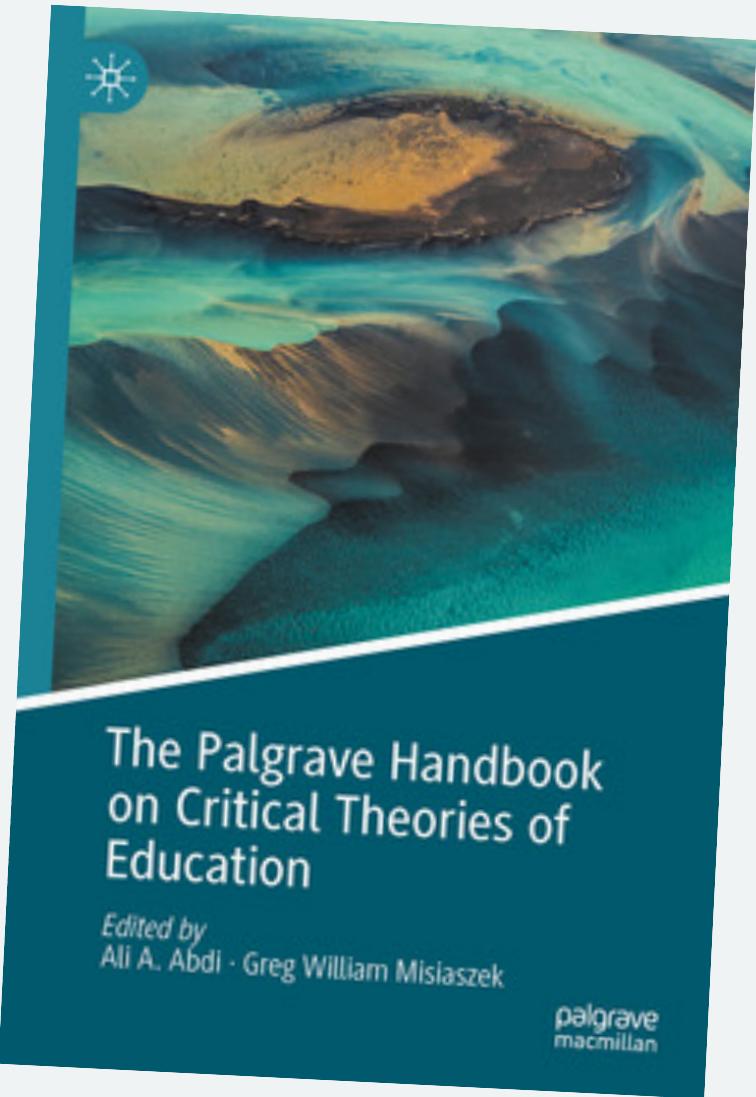

Future visions

and policies

Critical Document

Discourse Analysis

- Critical discourse analysis of intergovernmental and governmental, international and national documents
- Reports and working papers from the OECD, World Economic Forum, UNESCO, EU, International Labour Organization, Finnish Ministry of Education, Finnish National Agency for Education, Finnish Government, Microsoft (with McKinsey & Co, educational influencers), Google (e.g. with The Economist)
- Digivision 2030 initiative documents: “Finland as a model country for flexible learning, and a global pioneer in higher education” (<https://digivisio2030.fi>)

Key discursive statements

1. “The future is more uncertain than ever”
2. “Digitalization is disrupting/transforming education and work” (digitalization as challenge)
3. “There is huge potential in digitalization to transform education and work” (digitalization as potential)
4. “Education is outdated/not yet fulfilling its potential”
5. “Digitalization of education can ensure a better future”

Note on the authority and power of these documents

- An example from a Finnish National Agency for Education report
- 23 international sources on digitalization:
 - + 5 company websites/blogs
 - + 1 Market research website
 - + 2 Company and analyst websites/blogs (HolonIQ, Microsoft)
 - + 3 Newspapers and other publication websites/blogs
 - + 6 Intergovernmental organization and actor reports
 - + 3 Associations and non-profit organizations
 - + 1 Conference paper
 - + 1 Academic publisher website
 - + 1 journal editorial
 - + 0 Peer reviewed research articles

Utopian elements in the documents

“Utopia”:

Thomas More coined the word as the title and locus of his 1516 Utopia in a pun which conflates *outopos* or no place and *eutopos* or good place. Consequently utopia is widely understood as an imagined perfect society or wishfully constructed place which does not and cannot exist. (Ruth Levitas, Utopia as Method, 2013, p. 3)

1. There is something wrong with the current state of things (also posing a sense of ‘crisis’)
2. (Technological) solutions or blueprints on how the world could be changed “better”
3. Implicitly defining what is desirable or “better”

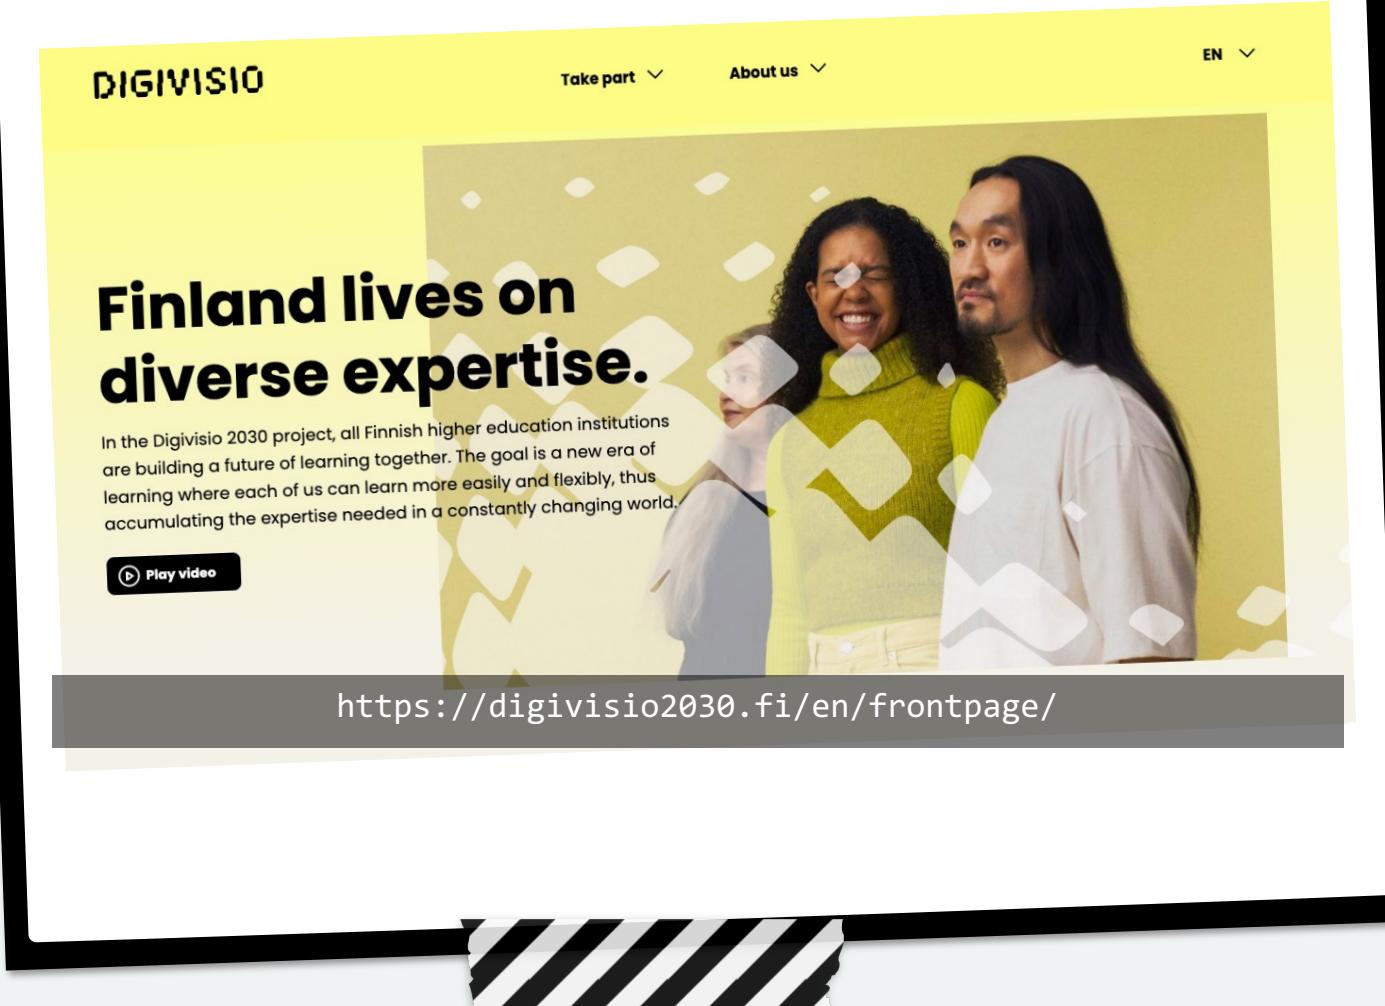

“Official Document Utopias”

- These documents are devices that factualize the future which can be ensured with digitalization/datafication
- They build a future they only claim to predict
- Possible futures become *a* future

Digivisio 2030: Operationalizing a technological utopia?

DIGIVISIO

Take part ▾ About us ▾ EN ▾

Finland lives on diverse expertise.

In the Digivisio 2030 project, all Finnish higher education institutions are building a future of learning together. The goal is a new era of learning where each of us can learn more easily and flexibly, thus accumulating the expertise needed in a constantly changing world.

Play video

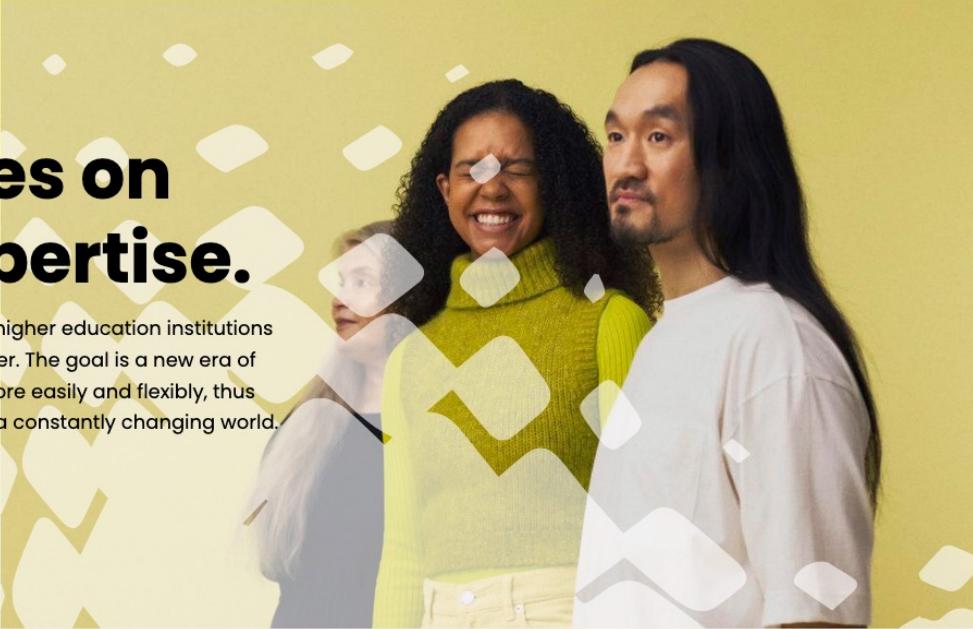

<https://digivisio2030.fi/en/frontpage/>

- Funded by the Finnish Ministry of Education and Culture
- Involving all Finnish higher education institutions, Digivisio 2030 is a joint project whose aim is to create a future for learning that benefits higher education institutions, learners and our society as a whole. All 38 Finnish higher education institutions have signed the project's participation agreement, and the project office was established at the end of 2020.
(<https://digivisio2030.fi/en/basic-information-on-the-digivisio-2030-project>)

4 “promises” of Digivisio 2030

1. Learners have access to their own learning data and profile as well as the latest information on the trends and needs in the labour market.
2. Learner’s benefit at the centre of development
3. Higher education institutes become open communities led with information
4. National learning data reserves are opened for use by individuals and society. This brings international competitiveness for the whole of Finland. Nationally shared and refined information about learners, competences, learning and study contents becomes a unique success factor.

A national digital service platform

The objective of the program is to create, as mutual and stakeholder cooperation, by 2030

1. A National digital service platform that

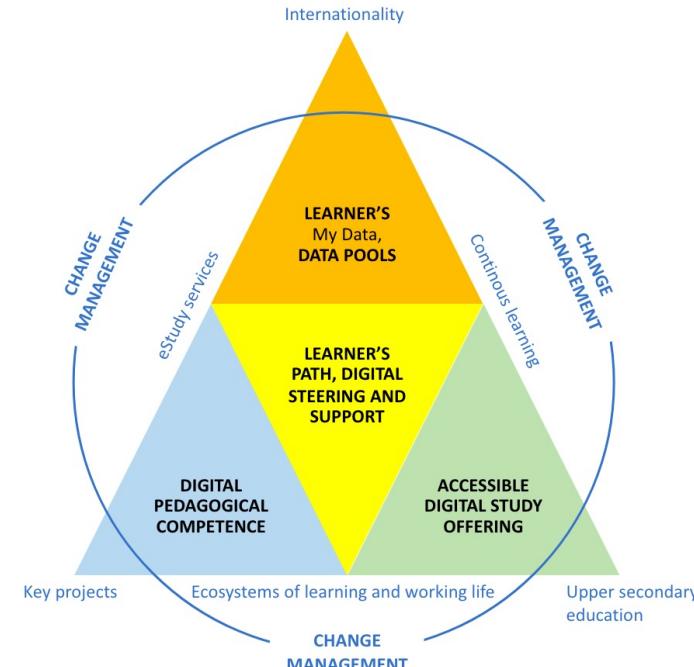

- a) enables the compatibility of digital services between higher education institutions,
- b) provides the learner's "my data" service and integrates the accumulation of the learner's competence before and after the higher education institution to the learning and career path and
- c) improves the compatibility of the actors' IT services and lowers the threshold for utilising national solutions.

2. Guidance based on digital pedagogics, the learner's path and shared data, which

- a) supports studies and student well-being regardless of time and place and in an accessible manner,
- b) Brings AI solutions as an aid in guidance, and
- c) places the learner's benefit at the centre of development.

3. Support for change management for higher education institutions, so that we can

- a) introduce the national digital service platform
- b) digitize student administration processes and admission to higher education institutions,
- c) support the development of higher education institutions into open communities managed by information, and
- d) make data available for individuals and society.

The screenshot shows a news article from the Sitra website. The header includes the Sitra logo, language links (FI / SV / EN), a search bar, and a menu icon. The article is categorized as 'ARTICLES' and has a duration of '4 min'. The main title is 'Gaia-X builds foundation for data markets'. The text discusses the project's role in the data economy, mentioning jointly agreed standards, technological solutions, and rulebooks. It highlights the opportunity for Finnish companies, including industrial corporations, SMEs, and startups. The writer is Laura Halenius, Project Director of a roadmap for a Fair Data Economy at Sitra. The article was published on February 17, 2021. A visual illustration at the bottom shows a tree growing from a network of underground cables, symbolizing the foundation of data markets.

Some problematizations and call for imagination

Some general problematizations

- + Abstract technological promises (e.g. “use analytics to support the student learning”) & developments that go against good pedagogical practices (e.g. “individual student paths” when a sense of community is important in online learning) (e.g. Thomas, Herbert, & Teräs, 2014).
- + Technology is multistable, it always changes human behavior and contexts in unpredictable ways (Ihde, 1998): To “work”, data, analytics and algorithms need humans to define data points and thus, abstraction of life. What happens e.g. to student experience and “learning” in such a process?
- + National data about learners as an economic “success factor” for national and international actors. A view from sociology of knowledge: There is no neutral knowledge. Anyone who says so, is not seeing it or is hiding their ideology.

ABSTRACT

Although digitalization has become an everyday phenomenon in higher education (HE), there is still limited understanding on how HE teachers experience the digitalized work environment. In this article we utilize narrative research methodology to share HE teachers' voices, addressing the following questions: What is the lived experience of being a teacher in digitalizing higher education? How has digitalization shaped the work environment in higher education? What meaning do HE teachers make of digitalization? The research participants are six university teachers with significant work experience. The findings are reported in the form of a classic tragedy narrative, which reveals that the rise of managerialism and neoliberalization in HE has changed teachers' work and the role of digital tools play in it, and teachers are experiencing an increasing sense of alienation. In conclusion, we elaborate these experiences theoretically and paint a picture of today's digitalized work environment in HE.

 KEYWORDS:    

- Teachers' lived experience on their work (not only teaching)
- Finnish HE teachers with 20 or more years of service
- From optimism and excitement to alienating bureaucracy
- Alienation and loss of agency hinder development

Speculative fiction and utopian thinking as ways to imagine alternative futures

Introduction: Unleashing Teachers' Imagination (Juha Suoranta, Marko Teräs, Hanna Teräs)

Digitalization and datafication are reshaping roles and practices in higher education. The Covid-19 pandemic has accelerated this process through the massive increase in the use of educational technology (EdTech) (Teräs et al. [2020](#)). As a part of this development, higher education is becoming increasingly data driven. Simultaneously, attempts to predict and prepare for future scenarios in education are driven by intergovernmental organization reports from OECD and UNESCO, in addition to national initiatives in digital education (Suoranta et al. [2022](#)). In these future scenarios, datafication, big data, learning analytics, and artificial intelligence promise more efficient and predictable higher education.

Collaboration and research data collection with Empathy-Based Stories and other methods

“It is 2050 and digitalization of education has developed further. The developments have been positive/negative for the teacher. Why? Imagine a situation and write a short story about it.”

The image shows a screenshot of the TQR (The Qualitative Report) journal website. The header features the TQR logo and the tagline "WHERE THE WORLD COMES TO LEARN QUALITATIVE RESEARCH".
